

IEEE Control Systems Society (CSS) is launching its second CSS Day on October 21-25, 2024. The theme for this CSS Day is "Control Enabling a Carbon Neutral World". CSS Day is a series of events celebrating CSS's impact on technology, education, and society. It is dedicated to reaching out and engaging our community and is designated to expand CSS visibility and diversity. Through week-long activities, our community will showcase CSS research themes, membership activities, and outreach and diversity progress.

Various online and in-person events will bring the community together to connect, reflect, and celebrate. The CSS Day events include:

- Presidents' round table: A round table chaired by CSS President Magnus Egerstedt, with the participation of past CSS presidents sharing their perspectives on the past, present, and future of CSS, will kick off the CSS Day on a high note.
- Control history forum: Organized by Prof. Alberto Isidori, the CSS History Standing Committee chair, five lectures will walk us through the history lane of our field.
- Technical Sessions sponsored by IEEE CSS Technical Committees with many addressing the theme of the event.
- Chapter/membership activities: Chapters around the world have organized local outreach activities, seminars, and workshops that will be streamed and shared with the entire CSS community.
- An industry session including industry panelists from around the world.
- A student oriented session featuring panel discussions and speakers on topics of interest to students in the field of control systems.
- A Women in Control session highlighting the contributions of women to our field.

All events are free. Registration is required to access the digital platform.
